                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 9, M

Patent No. 6475746
GENERAL INFORMATION:
APPLICANT: Weinshank et al, Richard L.
TITLE OF INVENTION: Method of Obtaining A C.
TITLE OF INVENTION: Selective Compound
FILE REFERENCE: 36536-BA
CURRENT APPLICATION NUMBER: US/09/371,705
CURRENT FILING DATE: 1999-08-09
PRIOR APPLICATION NUMBER: 5,935,925
PRIOR FILING DATE: 1999-08-10
PRIOR FILING DATE: 1999-08-10

PUNCTION: This is one of the several different receptors for 5-punctions. This is one of the biogenic hormone that functions by Adroxytrypteamine (serotonin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins. Probably involved in surviety and depression.

SUBCELLULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: Brain; in the CAl region of hippocampus, the medial habenula, and rappe nuclei.

SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

STRONGEST TO THE OTHER SHT-5 SUBTYPE RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCE FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     64
                                                                                               anxiety and depression.
SUBCELLULAR LOCATION: Integral membrane protein.
IISSUE SPECIFICITY: Expressed predominantly in the central nervous system; in the hippocampus, habenula, and the doral raphe.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
STRONGEST TO THE OTHER 5HT-5 SUBTYPE RECEPTORS.
FUNCTION: This is one of the several different receptors for 5-hydroxtryptamine (serotconin), a biogenia hormone that functions as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins. Probably involved in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MetGluValSerAsnLeuSerGlyAlaThrProGlyLeuAlaPheProProGlyProGlu

In FUNCTION: This is one of the several different receptors for 5-
In Addroxytryptamine (serotomin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins.
-!- SUBCELLUIAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
STRONGEST TO THE OTHER SHT-5 SUBTYPE RECEPTORS.

"Mouse 5-hydroxytryptamine5A and 5-hydroxytryptamine5B receptors
of define a new family of serotonin receptors: cloning, functional
expression, and chromosomal localization.";
Mol. Pharmacol. 43:313-319(1993).

I. FUNCTION: This is one of the several different receptors for 5-
hydroxytryptamine (serotonin), a biogenic hormone that functions
as a neurotransmitter, a hormone, and a mitogen. The activity of
this receptor is mediated by G protein.

I. SUBCELLULAR LOCATION: Integral membrane protein.

I. SUBCELLULAR LOCATION: Integral membrane protein.

I. TISSUE SPECIFICITY: Expressed predominantly in the central nervous
system; in the cerebral cortex, hippocampus, habenula, olfactory
bulb and granular layer of the cerebellum.

I. SIMCIARITY: Belongs to family 1 of G-protein coupled receptors.

STRONGEST TO THE OTHER 5HT-5 SUBTYPE RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright. 	10 4 S		ALTERENTIALILY EXPRESSED IN TAI DEALN."; R. Proc. Natl. Acad. Sci. U.S.A. 90:3452-3456(1993). C! FUNCTION: This is one of the several different receptors for 5- C. hydroxytryptamine (serotonin), a biogenic hormone that functions C. as a neurotransmitter. a hormone, and a mitogen. The activity of this receptor is mediated by G proteins. C! SUBCELLULAR LOCATION: Integral membrane protein. C! SIMILARITY: Belongs to family 1 of G-protein coupled receptors. C: SIMILARITY: Belongs to family 1 of G-protein coupled receptors. C. C. STRONGEST TO THE OTHER SHT-5 SUBTYPE RECEPTORS. C. C. STRONGEST TO THE OTHER SHT-5 SUBTYPE RECEPTORS. C. C. STRONGEST TO THE OTHER SHT-6 SUBTYPE RECEPTORS.	the Buropean Bioinformatics Institute. The activity of this receptor is mediated by G proteins that inhibit adenylate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nothen M.M., Erdmann J., Shimron-Abarbanell D., Propping P.; "Identification of genetic variation in the human serotonin 1D beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cyclase activity.
SUBCELLULAR LOCATION: Integral membrane protein.
SUBCELLULAR LOCATION: Integral membrane protein.
PTM: Phosphorylated, and palmitoylated. Desensitization of the receptor may be mediated by its phosphorylation.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors. Strongest to the other 5HT-1 subtype receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE=92210526; PubMed=1348246;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Kitano T., Kobayakawa H., Saitou N.;

"Silver project."

Submitted (APR-200) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: This is one of the several different receptors for 5-
hydroxytryptamine (serotonin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins that inhibit adenylate cyclase activity (By similarity).

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- FTM: Phosphorylated, and palmitoylated. Desensitization of the receptor may be mediated by its phosphorylation (By similarity).

-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

Strongest to the other 5HT-1 subtype receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3 (POTENTIAL).

SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
Strongest to the other 5HT-1 subtype receptors.
                                                                                                                                         Spalax leucodon ehrenbergi (Ehrenberg's mole rat).

                                                                                                                                                                                                                                                                                                                                                                          FUNCTION: This is one of the several different receptors for 5-hydroxytryptamine (serotonin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins that inhibit adenylate
                                                                                                                                                                                                                                                                                                                                                                                                                           cyclase activity.
SUBCELIOLAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
Strongest to the other 5HT-1 subtype receptors.
                                                                                                                                                                                                                                                                                                                                           guinea

Monferini E., Givaldo E., Ladinsky H., Vassart G., Dumont J.E.;
"The orphan receptor cDNA RDC4 encodes a 5-HTID serotonin receptor.";
Biochem. Biophys. Res. Commun. 180:1460-1468(1991).
                                                                                                                                                                                                                                                                                                                                                                                                            "Expression and pharmacological characterization of a canine 5-hydroxytryptaminelD receptor subtype.";
Mol. Pharmacol. 40:1036-1042(1991)
-!- FUNCTION: This is one of the several different receptors for 5-hydroxytryptamine (serotonin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins that inhibit adenylate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cyclase activity.
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
Strongest to the other 5HT-1 subtype receptors.
                                                                       ტ
